Yasmine El Masri is a post-doctoral research fellow at OUCEA. She is currently working on a project partially funded by Pearson on predicting task difficulty in educational assessments. Her doctoral research investigated the impact of translation on item difficulty in large-scale international assessments. She used various quantitative techniques, namely Rasch modelling and differential item functioning (DIF) to compare three language versions (English, French and Arabic) of the same PISA science test. Yasmine previously worked as a secondary school science teacher in Lebanon and the United Arab Emirates. She has completed her PhD at the University of Oxford and earned a master’s degree in science education and a Bachelor’s of Science in Biology from the American University of Beirut. Her research interests include item difficulty and demands, language in assessment, science assessments, differential item functioning, Rasch modelling, and international large-scale assessments.

Therese N. Hopfenbeck is Associate Professor, Deputy Director and Lecturer in Educational Assessment at the Oxford University Centre for Educational Assessment. Her research interests are focused upon large-scale comparative assessments and how international testing has shaped public policy across education systems. In addition she is interested in different models of classroom assessment and self-regulation. Originally a secondary school teacher with many years experience in the classroom, Therese has also worked as school district supervisor and as a consultant for the Norwegian Directorate for Education and Training regarding the development and evaluation of national exams in English as a foreign language. Therese is Research Manager of PIRLS 2016 in England, and principle investigator for the ESRC funded project PIRLS for teachers. She is Lead Editor of the international research journal Assessment in Education: Principles, policy and practice.
